

THE PROBLEM TODAY

Filling a cancellation takes a lot of hands-on work, and when it slips, clients notice

What has gone wrong

- **Double-booked Saturday haircut.** After a group text, two clients said yes to the same spot. One left angry.
- **Openings left empty.** Nobody followed up with the next person, so the chair sat unused.

Lena's priorities, in order

- 1 **Keep clients happy.**
- 2 **Avoid double-booking** and other mistakes.
- 3 **Fill gaps**, but not if it creates more problems.

WHAT THE PROTOTYPE DOES

Log the cancellation once; it offers the opening to one client at a time until someone says yes

↳ "No," or no reply in 15 minutes? It moves on to the next person automatically.

Late replies are never booked

Someone who answers after their turn is told: *"This offer has expired and the opening may have gone to someone else."*

Staff can cancel any time

If the original client comes back or the stylist can't make it. Whoever holds the offer is told it's no longer available.

Safe if the computer restarts

It runs on Temporal, a workflow engine that keeps each opening's countdown and replies safe even if the computer restarts.

WHAT STAFF SEE

You and Carla can always see who has the offer, what happens next, and when it has stopped

Carla · Haircut · 3:00 PM

Offering

Has the offer	Jordan · 11 min left
Next in line	Elena
Declined	Maya
Couldn't text	Priya

Notice: Priya's number couldn't be texted, so the offer moved to Jordan.

Illustration with fictional clients. Status badges: Offering, Booked, Nobody available, Too late, Cancelled, Needs attention.

When something goes wrong, it says so

A phone number doesn't work	That client is skipped and marked "Couldn't text." The next person gets the offer.
Texting is down for a moment	It keeps retrying. If it still can't send, it stops and says "Please contact clients directly."
Too close to the appointment	No new offers within 45 minutes of the start time. The opening is marked "Too late."
Nobody fits, or everyone passes	A notice says nobody is available, so staff know to stop waiting.

This is a working prototype to try the rules safely; it does not touch real clients yet

Simulated or left out for now

- **No real texts.** Messages appear on a pretend client phone on screen, with Yes and No buttons.
- **No Square or Google Sheets connection.** Staff type in the cancellation and update Square themselves.
- **Made-up waitlist.** The clients are fictional sample people.
- **No logins** and no way to edit the waitlist on the page.
- **"Demo speed"** shortens offers to 30 seconds, only for showing it live. Normal is 15 minutes.

Please confirm

- **The 45-minute cutoff.** We stop sending offers 45 minutes before the appointment, and an offer never runs past that point. Is that the right amount of time to get ready and arrive?
- **People who say no or don't reply** aren't asked again for that opening, but stay on the waitlist for future ones. Is that what you want?

A PRACTICAL NEXT STEP

Try it for real with one stylist for 3 weeks, with Square still updated by hand

BEFORE STARTING

Connect a real texting service to the salon's number. Load that stylist's waitlist.

WEEKS 1–3

Every cancellation for that stylist goes through the system. Staff keep updating Square themselves.

END OF PILOT

Review together: how many openings were filled, any client complaints, and whether 15 minutes and the 45-minute cutoff feel right.

What we need from you to start

- 1 **Which stylist** to start with.
- 2 **OK to text from the salon's number**, and approval of the wording of the offer text.
- 3 **Confirm or adjust** the 15-minute reply window and 45-minute cutoff.

Why this is low-risk

- Only one stylist's openings are affected.
- Square stays exactly as it is today.
- Staff can cancel any offer, and can stop the pilot at any time.
